Oluwasegun (Segun) Olumbe

Full-Stack Engineer · Streaming, TV & AI-First Development

London, UK · 07863 056417 · solumbesyl@gmail.com · linkedin.com/in/segunolumbe · github.com/nugehs · segunolumbe.com

Summary

Full-stack engineer with over a decade of experience. For the last six years at Sky, I have helped build the streaming platform behind NOW TV, Peacock and SkyShowtime, serving 70M+ active users, as part of the commerce work-stream team. I led Peacock's Spanish-language (Telemundo) launch for the 2026 FIFA World Cup and the Extra Member paid-sharing feature, which opened a new subscription revenue line on in-app purchase devices like Amazon and Google Chromecast.

I work AI-first: since January 2026, features are built with coding agents and reviewed by engineers, backed by agent skills and custom agents that automate feature testing. I own services end to end, from design and CI/CD to observability and incident response. Outside work, I built and run BashBop, an event-ticketing platform with payouts, and Solumbe, open-source trust tooling for AI coding agents.

Experience

Sky · Developer, Streaming Platform · London (Hybrid) · Jul 2020 – Present

- Led Peacock's dual-language (Telemundo) launch for the 2026 FIFA World Cup, delivering a full Spanish-language viewing experience against a fixed, globally visible deadline and coordinating product, localisation and QA.
- Led the Extra Member paid-sharing feature from design to production on in-app purchase devices like Amazon and Google Chromecast, launching a new subscription revenue line on the platform.
- Build and maintain core platform services shared across NOW TV, Peacock and SkyShowtime, serving 70M+ active users across multiple continents.
- Own CI/CD across Jenkins and Concourse: unit, E2E, visual-regression and feature testing with Cypress and WebDriver.io.
- Built New Relic dashboards and alerting for platform health; lead incident detection and response for owned services.

MatchesFashion · Software Engineer (Full-Stack) · London · Sep 2018 – Jun 2020

- Built and supported e-commerce microservices and internal apps with React, GraphQL/Apollo and Node.js on Docker and Kubernetes, in a team of 3–5 engineers, including Electron desktop tools.
- Go-to engineer for production issues in owned services, working with application-support and infrastructure teams.

Quartix Ltd · Web Application Developer · London · Jan 2016 – Aug 2018

Vehicle tracking and fleet telematics

- Built an Android app that connects to in-vehicle OBD devices, bringing vehicle data from the hardware into Quartix's systems.
- Developed business applications with C# and SQL Server back ends and Angular/AngularJS single-page front ends, owning both the UI design and the implementation.
- Built Node.js services and Cordova hybrid mobile apps alongside the core platform.
- Wrote automated tests with Jest and Mocha; prototyped a chatbot with Dialogflow and Firebase Functions.

EMP Publishing · Web Developer · London · Jan 2015 – Dec 2015

- Built and maintained website UI, templates and new products, growing site traffic and advertising revenue; built brand-strategy and statistics systems.
- Managed external developers on web projects and worked with stakeholders, sales and affiliate partners; clients included KPMG.

Independent products and open source

- **BashBop** (bashbop.com): event-ticketing platform with payouts, built and run solo; holds seats under concurrent demand without overselling (NestJS, PostgreSQL, Redis, Stripe, AWS).
- **Solumbe** (github.com/BASHBOP/solumbe): open-source trust harness for AI coding agents, listed on the official MCP registry.
- **gate, tieline, bouncer, aiglare** (github.com/nugehs): open-source CI and MCP tools for merge verdicts, contract drift, Online Safety Act checks and AI governance.
- **Snap A Bird** (snapabird.com): identifies 964 UK bird species offline with on-device BirdNET, built for my son; sightings feed an open Creative Commons dataset.
- **Brain Boost Buddy** (brainboostbuddy.com): desktop app that keeps a child's laptop locked until they clear a short maths or English quiz (UK Years 2–6).

Skills

- **Languages & frameworks:** TypeScript, JavaScript, React, Lightning JS, Node.js, Express, NestJS, GraphQL/Apollo, Angular, C#, ASP.NET, Kotlin, Python, Go, SQL
- **Cloud, data & delivery:** AWS, Kubernetes, Docker, Jenkins, Concourse, GitHub Actions, New Relic, PostgreSQL, SQL Server, MongoDB, Redis
- **Testing & devices:** Cypress, WebDriver.io, Jest, Mocha, accessibility and cross-browser testing; Android, Cordova, smart TV
- **AI:** Cursor, GitHub Copilot, Augment Code (Auggie), agent skills and custom agents, MCP servers, AI-assisted test automation

Education and certifications

- **BSc (Hons) Computing Information, First Class** · University of Greenwich, 2015. Dissertation: UX/UI design strategy for mobile web applications.
- **Advanced Diploma, Management Information Systems** · East London College, 2012
- AWS: Fundamentals of Generative AI for Beginners · Google Cloud: Introduction to Generative AI
