

Oluwasegun (Segun) Olumbe

Senior Full-Stack Engineer · Streaming, TV & AI-First Development

London, UK · 07863 056417 · solumbesyl@gmail.com · linkedin.com/in/segunolumbe · github.com/nugehs · segunolumbe.com

SUMMARY

Senior full-stack engineer with 15+ years' experience, the last six at Sky building the streaming platform behind NOW TV, Peacock and SkyShowtime (70M+ active users). Led delivery of Peacock's Spanish-language (Telemundo) experience for the 2026 FIFA World Cup, the Extra Member paid-sharing feature, and playback support for legacy Samsung TVs. Since January 2026 works AI-first: features are built with coding agents and reviewed by engineers, backed by agent skills and custom agents that automate feature testing, alongside new TV app work in Lightning JS. Owns services end to end: design, CI/CD, observability and incident response. Outside work, builds and runs production products and open-source AI developer tooling.

EXPERIENCE

Sky · Developer, Streaming Platform

London (Hybrid) · Jul 2020 – Present

- Led Peacock's dual-language (Telemundo) launch for the 2026 FIFA World Cup, delivering a full Spanish-language viewing experience against a fixed, globally visible deadline and coordinating product, localisation and QA.
- Led the Extra Member paid-sharing feature from design to production, launching a new subscription revenue line on the platform.
- Led the THEOplayer integration for 2016-era Samsung TVs, keeping playback working on older hardware still active in the subscriber base.
- Working AI-first since January 2026: features are built with coding agents (GitHub Copilot, then Augment Code/Auggie, now Cursor), and every change is reviewed by an engineer before merge.
- Build reusable agent skills and custom agents for the team, including tooling that automates feature testing.
- Since January 2026, building TV app features with Lightning JS, the WebGL-based framework for smart TVs and set-top boxes.
- Build and maintain core platform services shared across NOW TV, Peacock and SkyShowtime, serving 70M+ active users across multiple continents.
- Own CI/CD across Jenkins and Concourse: unit, E2E, visual-regression and feature testing with Cypress and WebDriver.io.
- Built New Relic dashboards and alerting for platform health; lead incident detection and response for owned services.

Stack: TypeScript, React, Lightning JS, Node/Express, Android/Kotlin, AWS, Jenkins, Concourse, Cypress, WebDriver.io, Jest, New Relic · **AI:** Cursor, GitHub Copilot, Augment Code

MatchesFashion · Software Engineer (Full-Stack)

London · Sep 2018 – Jun 2020

- Built and supported e-commerce microservices and internal apps with React, GraphQL/Apollo and Node.js on Docker and Kubernetes, in a team of 3–5 engineers, including Electron desktop tools.
- Go-to engineer for production issues in owned services, working with application-support and infrastructure teams.

Stack: React, Redux, Material UI, Electron, GraphQL/Apollo, Node.js, MongoDB, Docker, Kubernetes, AWS, Jenkins

Quartix Ltd · Web Application Developer

London · Jan 2016 – Aug 2018

Vehicle tracking and fleet telematics

- Built an Android app that connects to in-vehicle OBD devices, bringing vehicle data from the hardware into Quartix's systems.
- Developed business applications with C# and SQL Server back ends and Angular/AngularJS single-page front ends, owning both the UI design and the implementation.
- Built Node.js services and Cordova hybrid mobile apps alongside the core platform.
- Wrote automated tests with Jest and Mocha; prototyped a chatbot with Dialogflow and Firebase Functions.

Stack: C#, SQL Server, Angular, AngularJS, Node.js, Android, Cordova, Bootstrap, Webpack, Jest, Mocha, Git/SVN

- Built and maintained website UI, templates and new products, growing site traffic and advertising revenue; built brand-strategy and statistics systems.
- Managed external developers on web projects and worked with stakeholders, sales and affiliate partners; clients included KPMG.

Earlier: freelance web development from 2010 (PHP, WordPress, jQuery); Assistant Technical Officer, OAU Centre for Distance Learning, 2008–2009 (e-learning portal and technical support).

INDEPENDENT PRODUCTS & OPEN SOURCE

- **BashBop** (bashbop.com): event-ticketing platform with payouts, built and run solo. Booking and payment flow holds seats under concurrent demand without overselling (NestJS, PostgreSQL/Prisma, Redis, Stripe, AWS, Docker, GitHub Actions).
- **Solumbe** (github.com/BASHBOP/solumbe): open-source trust harness for AI coding agents, listed on the official MCP registry. Gives agents deterministic repository context, routes each task to a cheap, mid or premium model, and checks risk, secrets, CI and review readiness before merge.
- **gate, tieline, bouncer, aiglare** (github.com/nugehs): open-source CI and MCP tools for one pass/warn/fail merge verdict, frontend/backend contract drift, UK Online Safety Act checks, and AI-governance scanning.
- **Snap A Bird** (snapabird.com): identifies 964 UK bird species offline with on-device BirdNET, built for my son; sightings feed an open Creative Commons dataset.
- **Brain Boost Buddy** (brainboostbuddy.com): desktop app that keeps a child's laptop locked until they clear a short maths or English quiz (UK Years 2–6).

SKILLS

Languages & frameworks: TypeScript, JavaScript, React, Lightning JS, Node.js, Express, NestJS, GraphQL/Apollo, Angular, C#, Kotlin, Python, Go, SQL

Cloud & delivery: AWS, Kubernetes, Docker, Jenkins, Concourse, GitHub Actions, New Relic

Data: PostgreSQL, SQL Server, MongoDB, Redis

Mobile & devices: Android, Cordova, smart TV, OBD vehicle devices

Testing: Cypress, WebDriver.io, Jest, Mocha, accessibility and cross-browser testing

AI: Cursor, GitHub Copilot, Augment Code (Auggie), agent skills and custom agents, MCP servers, AI-assisted test automation

EDUCATION & CERTIFICATIONS

BSc (Hons) Computing Information, First Class · University of Greenwich, 2015. Dissertation: UX/UI design strategy for mobile web applications.

Advanced Diploma, Management Information Systems · East London College, 2012

AWS: Fundamentals of Generative AI for Beginners · Google Cloud: Introduction to Generative AI
